

Contribution to the Knowledge of the Family Eulophidae (Hymenoptera: Chalcidoidea) from Turkey, with Some New Records

Lütfiye Gençer¹

Data are presented on the occurrence of 51 species of the family Eulophidae in Turkey based on material obtained mainly from grass and leaves with leaf miners. The paper combines the faunistic and distributional data obtained from recent studies with all other species of the family known from Turkey up to now. The recorded genera (with the number of recorded species) are: *Aprostocetus* Westwood (20), *Baryscapus* Förster (8), *Cirrospilus* Westwood (2), *Diglyphus* Walker (5), *Hyssopus* Girault (2), *Euplectrus* Westwood (1), *Hemiptarsenus* Westwood (3), *Necremnus* Thomson (3), *Pnigalio* Schrank (2), *Pronotalia* Gradwell (1) and *Sympiesis* Förster (4). Twenty-eight species are reported for the first time in the Turkish fauna.

KEY WORDS: Hymenoptera; Eulophidae; Turkey.
